

UC Davis-Nature Conference

Harnessing the Plant Microbiome

Virtual Conference | October 22-24, 2021

#PlantMicrobiome2021

Having co-evolved with a plethora of microorganisms, plants benefit from microbial symbiosis, while simultaneously facing challenges from pathogens. New methodological advances in molecular biology, genetics, cell biology and systems biology have empowered the discovery and dissection of the complex networks underlying plant microbiomes. This conference will focus on how harnessing the plant microbiome holds great promise to expedite solutions to the grand challenges facing humanity, such as food security, food safety, and environmental sustainability.

**Early bird registration
by September 24:
From \$99 for students!
Abstract deadline:
September 24, 2021**
